FOREWORD

This report is one of a series of provincial reports on the results of the 1980 Census of Population and Housing conducted on May 1, 1980.

Demographic data presented herein consist of population distributions according to age, sex, marital status, highest grade completed and literacy. Other bases as gainful occupation, industry and migration are included likewise.

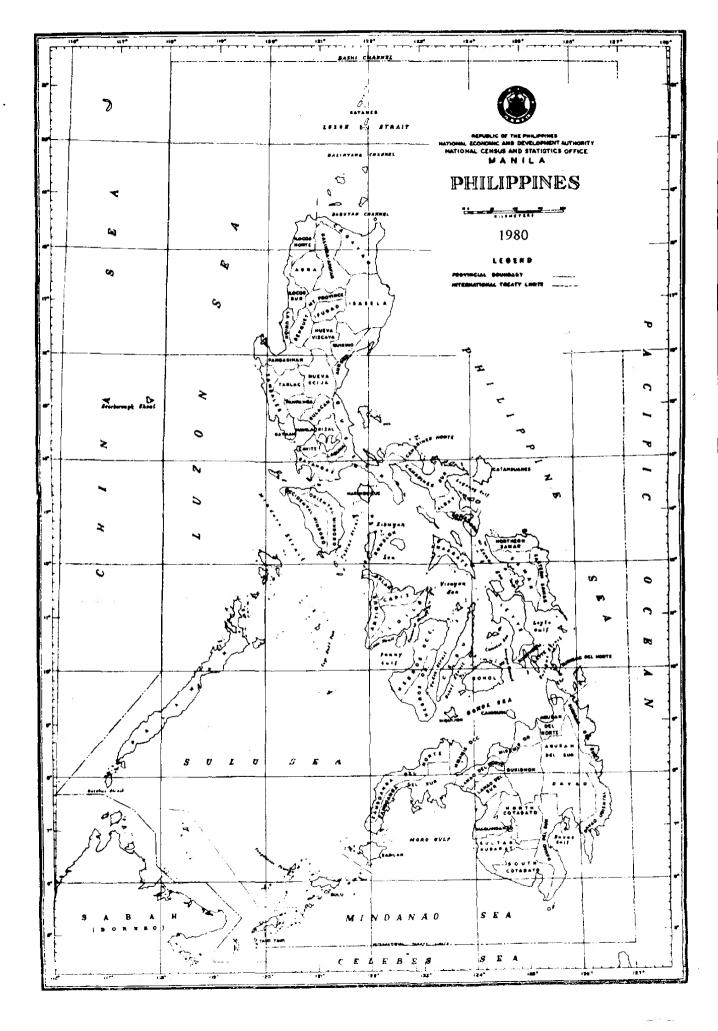

In the other aspect of the census, the following housing characteristics are considered: type of building, structural characteristics, floor area, type of tenure, use and source of water supply, lighting, type of toilet facilities, kind of cooking fuel used and appliances.

Subsequent issues will be the National Summary (Volume II) containing summary data on the final provincial reports and the Special Volume on National Capital Region (Metro Manila Area) which will cover data on the social, economic and demographic characteristics of the region.

Grateful acknowledgment is due the National Census Coordinating Board, government agencies, committees and the local coordinating boards for their invaluable assistance and cooperation.

TITO A. MIJARES

Manila, Philippines May 1983

Explanatory Text

GENERAL

INTRODUCTION

The National Census and Statistics Office conducted in May 1980, the 1980 Census of Population and Housing. This type of Census was also undertaken in May 1970. In May 1975 the Census of Population was taken as Phase I of the 1975 Integrated Census of the Population and Its Economic Activities. This nationwide undertaking was designed to obtain comprehensive data on the size, distribution, structure, change and socio-economic characteristics of the population and to take inventory of the housing accommodations, their geographic location, structural characteristics, available facilities, etc.

The population report contains data gathered from private households as well as collective households, while data on housing were collected from private households only.

It should be emphasized at this point that a complete enumeration of all households throughout the country was made but only sample household questionnaires representing 20 percent of the listed households were processed and the data published in this volume. In so doing, however, the total population count by barangay, male and female, obtained from the listing sheet taken simultaneously during the enumeration was maintained in computing the weights or expansion factors. It should also be noted that data on Tables 1 to 4 of the population tables refer to total population, that is, the population of the private households plus the collective households while Tables 5 to 10 cover exclusively the private household population.

Pursuant to the provision of Batas Pambansa Bilang 72, a final count of the population, by sex at barangay level was submitted to the President and was approved under Proclamation No. 2170 dated March 12, 1982. This report was published separately in 74 provincial volumes.

AUTHORITY FOR THE 1980 CENSUS

Under Commonwealth Act No. 591, the National Census and Statistics Office is authorized "to prepare for and undertake all censuses of population, agriculture, industry and commerce."

It may be mentioned in this regard that sometime in February 1980 Parliamentary Bill No. 809 was presented at the Batasang Pambansa, providing for the taking of an integrated census every ten years beginning 1980, with May 1 of every censal year as the reference date. This bill was approved into Batas Pambansa Bilang 72 on June 11, 1980, more than one month after the start of enumeration.

INTER-AGENCY PARTICIPATION

The expertise and technical advice of the National Economic and Development Authority Inter-Agency Committee on Population and Vital Statistics and its Technical Working Group on 1980 Census of Population and Housing played a vital role in the successful undertaking of the census.

The Committee's main function was to review the questionnaire, methodologies, concept, tabulation and other related aspects of the census in the production of data and development of systems that would produce more reliable and accurate result. It had for its chairman the Dean of the University of the Philippines Population Institute (UPPI) and for its members, one representative each from the Ministries of Human Settlements (MHS), National Defense (MND), Education and Culture (MEC), Health (MOH) and Local

Government and Community Development (MLGCD); the Commission on Population (POPCOM); National Economic and Development Authority (NEDA); and two representatives from the National Census and Statistics Office (NCSO). The Technical Working Group (TWG) for the 1980 Census of Population and Housing was headed by the Chief of the National Census and Household Surveys Department of NCSO and the members were representatives from the MHS, EPRS-NEDA, SCO-NEDA, POPCOM, UPPI, MOH, MEC, and the National Housing Authority (NHA).

Recommendations were likewise solicited from other government agencies for questions that should possibly be included in the population and housing portions in order to fill their data needs.

As early as August 1977, an NCSO Technical Committee for censuses was created. Ranking officials of the National Census and Statistics Office comprised the committee, with the Assistant Executive Director as Chairman, the Chief of the National Census and Household Surveys Department (NCHSD) as Vice-Chairman and Heads of six other departments and staff offices as members.

The committee coordinated with the Inter-Agency Committee and TWG of the NEDA on the technical aspect of the census and rendered a monthly progress report to the Executive Director. It provided the overall direction of the activities of the different subcommittees on census. The two subcommittees created, the Sub-Committee on Population and Housing Census and the Sub-Committee on Operations and Logistics Support, were directly charged with the preparatory work for the census undertaking.

CENSUS BOARDS

A systematized involvement of government agencies and instrumentalities was made possible largely through the concerted efforts of the members of the National Census Coordinating Board (NCCB) and the Provincial, City and Municipal Census Boards. The national board was created by NEDA Memorandum Order No. 4-80, dated April, 1980 and the local boards, by Memo Order No. 5-80, dated April 1, 1980, by virtue of the powers vested in the Minister of Economic Planning under Section 3 of Presidential Decree No. 1200.

The NCCB was headed by the Minister of Economic Planning as Chairman with the Executive Director as Executive Officer. Named as members were the Ministers of Agriculture, Budget, Education and Culture, Finance, Human Settlements, Public Works, Justice, Labor, Local Government and Community Development, National Defense, Natural Resources, Public Highways, Public Information and Transportation and Communication. Rules and regulations necessary for the successful undertaking of the census were issued by the Board.

At the local government level, similar functions were carried out by the Provincial City and Municipal Census Boards. The Provincial Governor headed the Provincial Census Board while the Division Superintendent of Schools was Vice-chairman. Members were the Highway District Engineer, Provincial Auditor, Provincial Commander of the Philippine Constabulary, the Provincial Development Officer and the Provincial Agriculturist. The City Census Board was composed of the City Mayor as Chairman; City Superintendent of Schools, Vice-chairman; and the City Engineer, City Assessor and City Development Officer, members. Finally, the Municipal Census Board had for its Chairman the Municipal Mayor and ably assisted by the District Supervisor as Vice-chairman. The members were the Municipal Agriculturist, Station Commander, Municipal Treasurer and the Municipal Development Officer.

For each of these local census boards, the Provincial Census Officer, City Census Officer and the Municipal Census Officer were designated Executive Officer of their respective Board.

CENSUS ORGANIZATION

The overall direction and instructions for the census undertaking emanated from the Executive Director of the National Census and Statistics Office or in his absence, the Assistant Executive Director.

Assisted by the Task Force from the Central Office and in coordination with the local census boards, the Regional Census Officers and the Provincial Census Officers directly supervised the field operations in their respective areas. The services of District Supervisors, Head Teachers and elementary school teachers from public schools were utilized as City/Municipal Census Supervisors, Team Supervisors and Enumerators in that order.

During the field operations, the 1980 Census Operations Center under the overall supervision of the National Census and Household Surveys Department Chief, was the operating body that monitored the overall operations. Lending support to the center were the Administrative and Fiscal Services Staff.

METHOD OF ENUMERATION AND USE OF SAMPLING

The household was used as the enumeration unit and a complete listing of dwelling units, including vacant ones, was done.

A combination of complete enumeration and sampling was adopted. While all households were asked on the count of the population and housing characteristics, only twenty percent (20%) were asked on other characteristics. The selection of sample households was done systematically with a random start from a listing of households which was prepared simultaneously with the enumeration.

Using PH Form 2 (Common Private Household Questionnaire) and with an 80 percent coverage, the items asked on population were household membership, relationship to head, line number of mother, sex, date of birth, age as of last birthday and marital status. For the housing items, the type of building and the construction materials of roof and outer walls, number of rooms, floor area of the dwelling unit and the year the building was built were asked.

In addition to the population and housing items just mentioned, additional information were asked using PH Form 3 (Sample Private Household Questionnaire) from the 20 percent samples such as language or dialect generally spoken at home, citizenship, usual residence of mother at person's birth, residence of person in 1975, ability to speak Pilipino and English, school attendance, highest grade completed, literacy, economic activity of the person, place of schooling or work, fertility, nature of occupancy of the dwelling unit and housing facilities and conveniences.

Collective households were enumerated using PH Form 4, where the information asked were the same as those in PH Form 2, excluding housing items.

PLACE WHERE ENUMERATED

All persons were enumerated in their usual place of residence, which is the geographic place (street, barangay, sitio, municipality or province) where the enumerated person usually resides. As a rule, it is the place where he usually sleeps; therefore, it may be the same as or different from the place where he was found at the time of the census.

POST ENUMERATION SURVEY

Originally the plan was to conduct a Post Enumeration Survey covering the whole country. For lack of funds the survey had to be confined to Metro Manila. Its purpose was to determine the extent of underenumeration or overenumeration in the 1980 Census of Population and Housing.

A sample of 132 barangays was selected. However, in 59 barangays which were divided into two or more enumeration areas (EAs), an enumeration area was chosen as sample.

A complete listing was made of households in the sample barangays/EAs using PH Form 1-B. Twenty percent of these households were selected as sample households and interviewed using PH Form 2, which was the same questionnaire used for non-sample households during the main enumeration. The housing portion of this form was disregarded.

CONTENT AND COVERAGE OF THE PUBLICATION

1 .. T.

In this publication, the population and households were described according to the respective items listed below:

Illandia - Itama

Population Items	Housing Items
Age	Type of Building
Sex	Type of Occupancy
Marital Status	Construction Materials of Roof and Outer Walls
Highest Grade Completed	Year Built
Literacy	Floor Area of Dwelling Unit
Language/Dialect Spoken in the Household	Tenure of Owner-Occupant with Respect to the Land
Gainful and Non-Gainful Occupation	Kind of Lighting Facilities
Major and Minor Industry	Use and Source of Water Supply
Migration'	Type of Toilet Facilities
	Kind of Cooking Fuel
	Household Appliances

The above items are presented in the ten population tables and nine housing tables of this report.

Except for figures on total population and sex, all other characteristics were based on a 20 percent sample.

Aside from these published tables, 10 other tables on the above characteristics plus 6 statistical tables dealing on ever-married women 15 years old and over are also available to statistical users.

DEFINITION OF TERMS AND CONCEPTS

I - POPULATION

BARANGAY

A barangay is the smallest political unit in the country and generally its enumeration is

assigned to one enumerator. For enumeration purposes, a large barangay is usually split into parts and each part is called an enumeration area (EA).

ENUMERATION AREA

An enumeration area (EA) is a delineated area assigned to one enumerator, usually consisting of about 300 households. A barangay or part of a barangay may have been designated as an enumeration area.

URBAN AND RURAL AREAS

The same concepts used in the 1970 and the 1975 Censuses were followed in classifying areas as urban. According to these concepts, urbanized areas consist of:

- 1. In their entirety, all cities and municipalities having a population density of at least 1,000 persons per square kilometer.
- 2. Poblaciones or central districts of municipalities and cities which have a population density of at least 500 persons per square kilometer.
- 3. Poblaciones or central districts (not included in 1 and 2), regardless of the population size, which have the following:
 - a. Street pattern, i.e., network of streets in either parallel or right-angle orientation:
 - b. At least six establishments (commercial, manufacturing, recreational and/or personal services); and
 - c. At least three of the following:
 - 1) A town hall, church or chapel with religious services at least once a month:
 - 2) A public plaza, park or cemetery;
 - 3) A market place or building where trading activities are carried on at least once a week;
 - 4) A public building like a school, hospital, puericulture and health center or library.
- 4. Barangays having at least 1,000 inhabitants which meet the conditions set forth in 3 above, and where the occupation of the inhabitants is predominantly non-farming or fishing.

All areas not falling under any of the above classifications are considered rural.

PERSONS ENUMERATED IN A PRIVATE HOUSEHOLD

The following were counted and enumerated as members of the household:

- 1. Persons whose usual place of residence is the place where the household lives and present at the time of visit of the enumerator, except those born after 12:01 A.M., May 1, 1980;
- 2. Persons whose usual residence is the place where the enumerated household lives, but temporarily away at the time of enumeration, such as:
 - a. persons temporarily away on vacation, business or pleasure trip or any other purpose in the Philippines who are expected to be back within six months,

- or within one year, if abroad;
- b. students who usually go home to their respective households at least once a week;
- c. persons working elsewhere who usually go home to their respective households at least once a week;
- d. patients confined in hospitals for not more than six months at the time of enumeration of the household, except those confined (1) as inmates (not patients in wards for temporary confinement) in tuberculosis pavilions;
 (2) in mental hospitals;
 (3) in leprosaria or leper colonies; and
 (4) in rehabilitation centers for drug addicts;
- e. trainees in the Armed Forces of the Philippines, if their training is not more than six months;
- f. convicts and detainees in provincial or municipal/city jails or military camps, who have been confined for not more than 6 months at the time of enumeration of the household, except those who have been sentenced for more than 6 months (including those whose sentence is on appeal), even though just confined; and
- g. officers and crew members of coastal, interisland, or fishing vessels; officers and crew members of ocean-going vessels who usually go home to their household at least once a year.
- 3. Boarders of the household who are working, looking for work or studying, and who do not go home at least once a week;
- 4. Employees of household-operated enterprises who eat and sleep with the household and who do not go home at least once a week;
- 5. Persons (other than those in "3" and "4") whose usual place of residence is elsewhere, but who have been away from their usual place of residence for more than 6 months:
- 6. Members of the Armed Forces of the Philippines including draftees, sleeping most of the nights with the household, except those who only board or lodge with the household and who usually go home at least once a week; in such a case, they will be enumerated in their own household;
- 7. Persons found in the household who have no usual place of residence elsewhere;
- 8. Persons found in the household who are not certain of being enumerated elsewhere;
- 9. Persons who consider the dwelling unit of the household as their usual place of residence but are living within the premises of a foreign embassy, ministry, legation or consulate, including non-Filipino employees who have been residents of the Philippines before such employment;
- 10. Citizens of foreign countries and Filipinos (balikbayan) who have resided or expect to reside in the Philippines for more than one year from arrival;
- 11. Persons who sleep in the same dwelling unit but may not be able to take all or some of their meals with the household because of the nature of their work or other similar reason (they take their meals at place of work, etc.), should be considered as part of the household; and
- 12. A household member who is alive as of 12:01 A.M., May 1, 1980, but dies prior to the enumeration of the household.

PERSONS TOTALLY EXCLUDED FROM THE ENUMERATION

Totally excluded from the population count of the Philippines were:

- 1. Foreign ambassadors, ministers, consuls or other diplomatic representatives, and members of their households (except Filipino employees and non-Filipino employees who had been residents of the Philippines prior to said employment);
- 2. Citizens of foreign countries living within the premises of an embassy, legation, chancellory or consulate;
- 3. Officers and enlisted men of U.S. Military or Naval Forces and non-Filipino members of their households, irrespective of residence; foreigners who are civilian employees in U.S. military or naval stations and member of their families living within the premises of said stations or reservation; (Note: for foreigners who are civilian employees of said stations living outside the station or reservation, see Item 5).
- 4. Citizens of foreign countries who are Chiefs and officials of international organizations like UN, ILO or USAID, who are subject to reassignment to other countries after their tour of duty in the Philippines, and members of their families;
- 5. Citizens of foreign countries together with non-Filipino members of their families, who are students or who are employed, or have business in the Philippines and have been in the Philippines or expect to stay in the country for one year or less from arrival;
- 6. Citizens of foreign countries and Filipinos with usual place of residence in a foreign country, who are visiting in the Philippines and expect to stay in the country for one year or less from arrival (e.g. a balikbayan who will return to his usual place of residence abroad after a short vacation or visit in the Philippines);
- 7. Citizens of foreign countries in refugee camps/vessels; and
- 8. Residents of the Philippines on vacation, pleasure or business trip, etc. abroad, who have been away or expected to be away from the Philippines for more than one year from departure.

USUAL PLACE OF RESIDENCE

The term refers to the geographic place (street, sitio, barrio/barangay, municipality or province) where the enumerated person usually resides. As a rule, it is the place where he sleeps most of the time; hence, it may be the same as or different from the place where he was found at the time of the census.

HOUSEHOLD

A household usually consists of a group of persons who sleep in the same dwelling unit and have common arrangements for the preparation and consumption of food. A person who lives alone is considered as one separate household. Although in most cases a household consists of a related family group, some household members may have no relationship to the central group. Boarders and servants, for instance are counted as part of a particular household if they take their meals with the household and sleep in the same dwelling unit. Persons who sleep with a household but individually cook their meals or eat elsewhere are each considered as single-person household.

Three generations may be living in one dwelling unit. If they are divided into two or more groups whose eating arrangements are independent from each other, each group is counted as a separate household.

PERSONS NOT LIVING IN HOUSEHOLD

Falling under this category are persons living in collective living quarters such as welfare institutions (orphanages and homes for the aged or infirm); penal and corrective institutions (jails, national penitentiary, and reformatory institutions); hospitals, sanatoria, leprosaria, and nurses homes; dormitories and boarding schools; lodging houses such as hotels, tourist homes and the like; military camps and others.

Most of these institutions house inmates for whom care or custody is provided by resident staff members, or persons residing in group quarters or in housing units on the institutional grounds.

Private families living within such institutions, however, are excluded from the classification, as well as persons (employees, students, etc.) who go home to their families on weekends or days off. Persons found in lodging houses, but who are on vacation or business trips and whose absence from home does not exceed six months on the day of enumeration, are likewise not counted as part of the institutional population.

RESPONDENT

A respondent is any responsible adult member of the household who furnished the information or answers to questions during the interview.

LANGUAGE/DIALECT GENERALLY SPOKEN IN THE HOUSEHOLD

This refers to the language or dialect spoken most of the time by members of the household. In cases where two or more languages/dialects are spoken by household members, the one most often used in conversations among members of the family of the head when most of them are gathered together is considered as the language/dialect generally spoken in the household.

HEAD OF HOUSEHOLD

The person responsible for the care and organization of the household is generally considered as the head of the household. He usually provides the chief source of income for the household.

In the case of a household consisting of two or more unrelated persons sharing a dwelling unit and sharing the same cooking facilities and meals, the head is usually the eldest male or female in the group regarded as such by the other members.

RELATIONSHIP TO HEAD OF HOUSEHOLD

This determines how each household member is related to the head, who is usually the husband or father, although in his absence or if incapacitated, the wife may be designated as head.

- 1. Spouse a woman/man married to and living with the head. This includes legal marriages as well as common-law relationships.
- 2. Son/daughter the head's own child, stepchild, or adopted child.

- 3. Son-in-law/daughter-in-law refers to a household member related to the head by marriage to his daughter or son.
- 4. Grandson/granddaughter child of the son or daughter of the head.
- 5. Other relative a household member related to the head by blood, marriage, or adoption. Father, mother, aunts, nephews, parents-in-law and cousins are examples.
- 6: Others any person in the household who is usually a non-relative of the head. Boarders and servants fall under this category. Certain members of the household who are related to the head by blood or affinity, but are actually boarders or servants in the household, are classified under "Others".

For collective households and group quarters, the question on relationship refers to the person's relationship to the institution or establishment, and not to the person recorded as head.

AGE AND DATE OF BIRTH

Data on the age of the population were obtained by asking the respondent the month and year of birth and the age itself of the household member before May 1, 1980. To ensure accuracy, a conversion table on age before May 1, 1980 was prepared for the use of enumerators, editors/coders and verifiers.

MARITAL STATUS

This refers to the civil status of all persons 10 years old and over. A person in this age group is classified as single, married, widowed, separated or divorced, or civil status unknown, based on the following definitions:

- a. Single If never been married.
- b. Married Legally married or living consensually with husband/wife without benefit of a legal marriage. A person classified as "married" includes one who remarried after having been widowed, separated or divorced or one temporarily separated from spouse owing to the nature of work, illness or service in the Armed Forces.
- c. Widowed A person whose spouse died and who has not remarried at the time of enumeration.
- d. Separated —If permanently separated from spouse either legally or otherwise, due to marital discord.
- e. Divorced If bond of matrimony has been dissolved through a court decree and is therefore free to remarry.
- f. Unknown If civil or marital status is either not known to the respondent, or the respondent himself refuses to reveal the marital status of such person.

CITIZENSHIP

Citizenship is defined as the legal nationality of a person. A citizen is a legal national of the country of the census; an alien is a non-national of the country.

LITERACY

A person is considered literate if he is able to read and write a simple message in any language or dialect.

HIGHEST GRADE COMPLETED

This has reference to the specific grade or year completed in elementary school, high school, college or university, by persons 7 years of age and over. Academic degree holders are classified according to the title of the degree received or the major field of study undertaken.

USUAL OCCUPATION

This refers to the specific job or kind of work that a person, who works most of the year, is usually pursuing, or if unemployed at the time of enumeration, it is the kind of work he used to do most of the year. A person is considered as usually working most of the year if he works for at least 10 hours a week for 26 weeks either for pay in cash or in kind, for a fee or profit in own farm, business or establishment or practice of a profession and without pay on family farm or enterprise. This particular group of workers is referred to as gainful workers.

For persons who do not work most of the year, the usual occupation relates to the non-gainful activities they usually do most of the year. Among such persons are housekeepers, students, pensioners, retired and disabled. However, a person who is housekeeping or schooling and also works in a gainful activity was reported as gainfully employed, even if more time was spent housekeeping or studying, as the case may be.

INDUSTRY

Industry refers to the specific character and nature of business or industry or the place where the work is being performed in connection with the job or occupation reported for a person.

EVER-MARRIED WOMAN

This refers to a woman who has already entered married life. Marriage here may either be legal or consensual union. At the time of enumeration the ever-married woman may still be married, or already widowed, separated or divorced.

II - HOUSING

BUILDING

A building is any independent free-standing structure comprising one or more rooms or other spaces, covered by a roof and enclosed within external walls or dividing walls with adjacent building which usually extend from the foundation to the roof. It usually contains one or more rooms internally connected with one another. A building therefore, is any structure intended for dwelling, storage, factory, shelter or for some other useful purposes.

For purposes of the 1980 Census of Population and Housing, only the following buildings were-listed and assigned building serial numbers:

- a. A house or any kind of building or shelter where people were actually living;
- b. A residential building (house, apartment or accesoria, condominium) that was vacant;

- c. Hotel, motel, lodging house, dormitory or camp (construction, logging, mining, etc.) in operation;
- d. A commercial, office, industrial, agricultural or other kinds of buildings with one or more dwelling units (containing a kitchen/kitchen-dining room, living room and a bedroom, and with separate entrance) which were all vacant.

The different types of buildings are:

- 1. Single house a complete structure intended for one household. It includes the so-called "nipa hut" or a small house that is built as a more or less permanent dwelling unit.
- 2. Duplex a structure intended for two households, with complete living facilities for each. It is divided either vertically or horizontally into two separate dwelling units which are usually identical.
- 3. Apartment/accesoria/condominium/row house

An apartment is a structure usually of several stories, made up of three or more independent entrances from internal halls or courts. It differs from an accesoria in that an apartment has one common entrance from the outside.

An accesoria is usually a one or two-floor structure divided into three or more dwelling units, each dwelling unit having its own separate entrance from the outside. Another name for accesoria is row house.

A condominium is usually a high-rise building where the dwelling units are owned individually but the land and other areas and facilities are owned in common.

- 4. Improvised (barong-barong) a makeshift or roughly constructed house usually built with salvaged materials.
- 5. Commercial/industrial/agricultural buildings not intended for human habitation but used as dwelling units at the time of the census.

Commercial – a building used for transacting business or rendering professional services, such as a storage or an office building.

Industrial – a building used for processing, assembling, fabricating, finishing, manufacturing or packaging operations, such as a factory or a plant.

Agricultural – any structure used for agricultural purposes, such as a barn, warehouse, rice mill, etc.

6. Other housing unit (natural shelter, boat, etc.)

This refers to living quarters which are not intended for human habitation nor located in permanent buildings but which are, nevertheless, used as living quarters at the time of the census. Caves, other natural shelters and mobile housing units such as trailer, barge, boat, etc., fall within this category.

- 7. Hotel, lodging house, dormitory, etc. This group comprises permanent structures which provide lodging and/or meals on fee basis. Hotels, motels, inns, boarding houses, dormitories, pensions and lodging houses fall within this category.
- 8. Institutional (hospital/convent/school dormitory/penal institution, etc.) a building intended for persons confined to receive medical, charitable, or other care treatment such as jails and penal colonies, and other buildings like convents, school dormitories, etc.
- 9. Other collective living quarters any structure or shelter which does not fall under items 7 and 8. Included in this category are camps which are defined sets of

premises originally intended for the temporary accommodation of persons with common activities or interests like military camps, and other camps established for the housing of workers in mining, agriculture, public works or other types of enterprises.

DWELLING UNIT

A dwelling unit is a separate and independent place of abode intended for habitation by one household, or one not intended for habitation but occupied as living quarters by a household at the time of the census.

Dwelling units counted included those that are occupied and those that are unoccupied.

CONSTRUCTION MATERIALS OF ROOF

The kinds of materials used are as follows:

- 1. Galvanized iron/aluminum
- 2. Tile/concrete/brick/stone
- 3. Asbestos
- 4. Cogon/nipa
- 5. Makeshift/salvaged materials
- 6. Others (anahaw, etc.)

CONSTRUCTION MATERIALS OF OUTER WALLS

The kinds of materials may be any of the following:

- 1. Galvanized iron/aluminum
- 2. Tile/concrete/brick/stone
- 3. Wood/plywood
- 4. Mixed tile/concrete/brick/stone and wood/plywood
- Asbestos
- 6. Bamboo/sawali
- 7. Cogon/nipa
- 8. Makeshift/salvaged materials
- 9. Others (anahaw, etc.)

If the roof or outer walls are constructed of two or more materials the material most used was reported.

YEAR BUILDING WAS BUILT

This refers to the year when the extent of construction permitted occupancy for living purposes. The year reported was the particular year when the occupancy started or when the building was fit for occupancy even if not occupied.

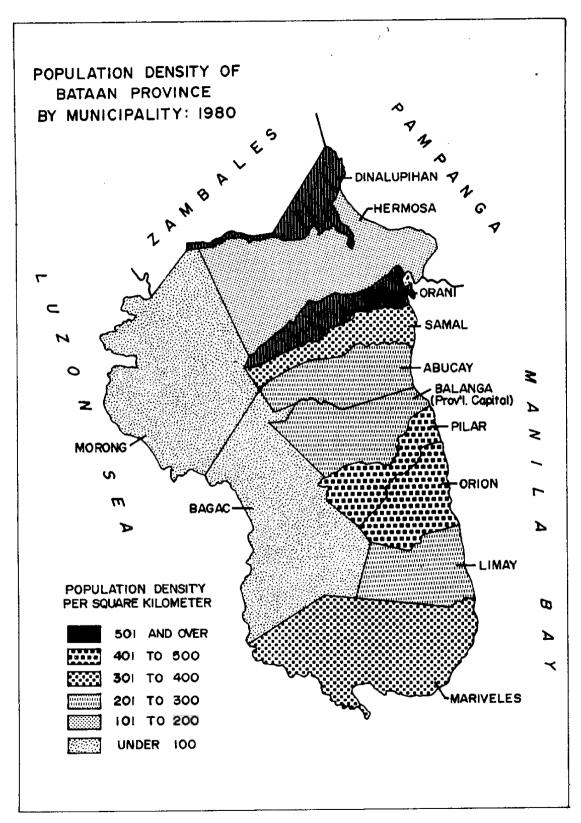

NUMBER OF ROOMS IN THE DWELLING UNIT

A room is defined as a space in a dwelling unit or other living quarters enclosed by walls reaching from the floor to the ceiling or roof covering, or at least to a height of 1.8 meters which are of permanent or semi-permanent structure, of a size large enough to hold a bed for an adult or at least has an area of 3 square meters.

The total number of rooms reported included the bedrooms, dining room, living room, kitchen, roofed veranda, library or music room and other separate spaces used or intended for dwelling purposes, as long as they meet the criteria of walls and floor space. Passageways, lobbies, bathrooms and toilets or rooms used exclusively as store/shop/clinic/grains storage (nobody sleeps therein) were not counted as rooms even if they meet the criteria.

FLOOR AREA OF DWELLING UNIT

This refers to the space enclosed by the exterior walls of the dwelling unit, or the space measured inside the outer walls of the spaces that are counted as rooms. In case of several floors, the area of each floor in square meters was taken and added together to get the total floor area of the dwelling unit. Area of floor spaces that are not considered rooms such as bathroom, toilet, storeroom, passageway was excluded in determining the floor area.

Bataan: A Brief Analysis

Bataan is located on the western coast of Luzon, right at the mouth of Manila Bay, "the gateway to commerce and industry". It occupies the whole peninsula between Manila Bay and the Luzon Sea. Except for its north and northeastern portions which are bounded respectively by Zambales and Pampanga, the province is virtually surrounded by sea waters.

The Zambales mountain range which runs through the heart of the province from north to south and several mountains scattered throughout the provincial terrain protect it from strong winds and typhoons. Compared to other provinces, Bataan is not richly endowed with natural resources. Its rugged terrain also leaves a small portion of land suitable for agriculture. However, the seas around it compensate for these inadequacies. Due to its strategic location, big business and development projects have mushroomed in the province. Among these are the Bataan Export Processing Zone (BEPZ), the Bataan Nuclear Power Plant (BNPP), and the Bataan Pulp and Paper Mill.

Twelve municipalities comprise the province with Balanga as the provincial capital.

POPULATION

As reported in the 1980 census, Bataan had 323,254 inhabitants of which 162,003 were males and 161,251 were females. Population-wise the province ranked number 52 among the 73 provinces of the country. Its annual geometric growth rate, placed at 4.19 percent, showed only a slight increase of 0.17 percentage point since May 1, 1975.

The smallest of six provinces comprising Region III, Bataan has a land area of 1,373.0 square kilometers. Its population density moved up from 191.7 in 1975 to 235.4, or an increase of 43.7 persons per square kilometer within the five-year period.

Bataan is still predominantly rural, despite a considerable increase of 16.09 percentage points in the proportion of urban dwellers between 1975 and 1980. More than half (55.60%) of its total population reside in rural areas while 44.40 percent are in urban areas. Nevertheless, it is heartening to note that the proportion of the rural population have steadily declined over the last three censal years — from 78.04 percent in 1970 to 71.69 percent in 1975, further moving down to 55.60 percent in 1980.

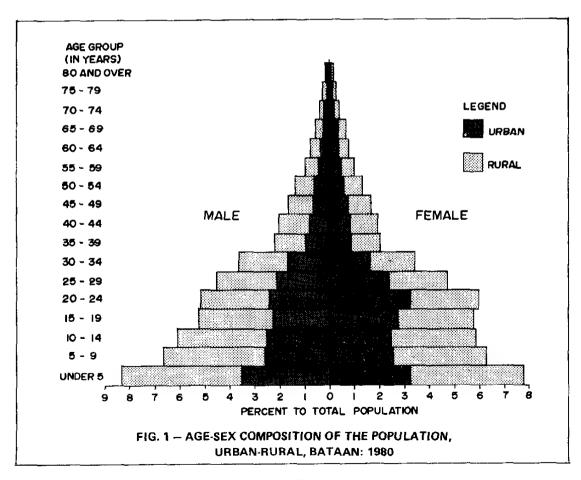

The sex ratio (number of males for every 100 females) of the province dropped from 103.88 in 1975 to 100.47 in 1980. The sex ratio was more pronounced in the rural areas (105.26) than in the urban areas where there were only 94.77 males for every 100 females.

(

A BRIEF ANALYSIS

TABLE A – URBAN-RURAL POPULATION BY SEX, BATAAN: 1970, 1975 AND 1980

Area Classifi-	19	80	1975		1970	
cation and Sex	Number	Percent	Number	Percent	Number	Percent
Total	323,254	100.00	263,269	100,00	216,210	100.00
Male	162,003	50.11	134,138	50.95	108,617	50.24
Female	161,251	49.89	129.131	49.05	107,593	49.76
Urban	143,513	44.40	74,544	28.31	47,475	21.96
Male	69,828	21.60	37,707	14.32	23,816	11.02
Female	73,685	22.80	36,837	13.99	23,659	10.94
Rural	179,741	55.60	188,725	71.69	168,735	78.04
Male	92,175	28.51	96,431	36.63	84,801	39.22
Female	87,566	27.09	92,294	35.06	83,934	38.82

The population pyramid for the rural male and female population tends to follow an expansive profile of the age-sex distribution. A large number of the rural male and female population are under 5 years of age. From this age group to the 80 years old and above, the population (male and female) decrease as each age group grows older, thus pyramid-like structures can be observed. On the other hand, the urban male and female population diverge from the usual pyramidal shape. Among the urban males the 20-24 years of age outnumber the 15-19 year-old group while among the urban females the 20-24 years of age outnumber those belonging to any of the younger age groups (Table 3). This phenomenon may be attributed to the burgeoning of business establishments and factories in urban places which resulted in the influx of the working age group.

AGE COMPOSITION

Bataan still has a high proportion of the younger age group (0-14 years) although a downward trend has been observed since 1970. The youth population comprise 41.00 percent of the provincial total, or a decrease of 2.65 percentage points between 1975 and 1980. Considered as the productive age group, the 15-64 age bracket on the other hand, maintains an upward trend. After rising 2.73 percentage points between 1970 and 1975, the productive age group increased 2.56 percentage points to 56.15 percent. The older age group (65 years and over) constitutes a small proportion of the provincial population (2.85%), manifesting a very slight increase of 0.09 percentage point within the five-year period.

TABLE B - AGE COMPOSITION OF THE POPULATION, BATAAN: 1970, 1975 AND 1980

Age	19	80	19	775	19	70
Composition	Number	Percent	Number	Percent	Number	Percent
Total	323,254	100.00	263,269	100.00	216,210	100.00
0 – 14 years 15 – 64 years 65 years and over	132,537 181,500 9,217	41.00 56.15 2.85	114,924 141,089 7,256	43.65 53.59 2.76	100,220 109,950 6,040	46.35 50.86 2.79

The median age of the population is 19 years; half of the population are below 19 years old and the other half, above this age. An almost constant increase in the median age of the population every five years is noted 19 in 1980, 17 in 1975 and 16 in 1970, or slight differences of 1 year from 1970 to 1975 and 2 years from 1975 to 1980, indicating that the population of Bataan is gradually growing older.

With an increased percentage of persons in the productive ages, the dependency ratio was much lower in 1980 than it was a decade ago. The dependency ratio dropped from >6.64 in 1970 to 86.60 in 1975 and moved down to 78.10 in 1980. The preceding table on age distribution shows that 43.85 percent of the population belong to the "dependent" population. Surprisingly, more dependents were found among the males than among the females. The urban dependency ratio was markedly lower than the rural ratio, 69.90 for the former and 85.24 for the latter. Of the total urban population 38.09 percent were below 15 years

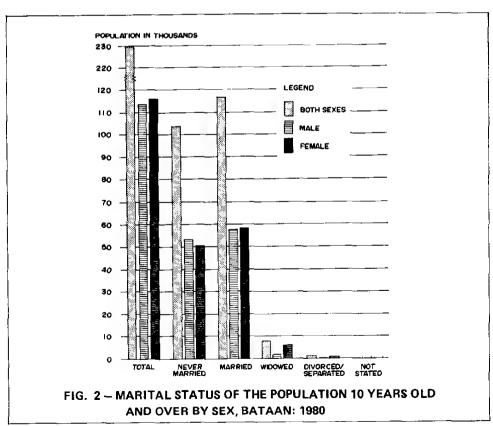

old, 58.86 percent were in the productive age bracket and only 3.05 percent, 65 and over. Comparatively, 43.32 percent of the rural residents were 0-14 years of age; 53.98 percent, 15-64 and 2.70 percent, 65 and over (Table 3).

MARITAL STATUS

Suddenly declining by 4.11 percentage points since 1975, never married persons, who in previous censuses had higher proportions of the population 10 years old and over than any of the other marital status categories, trailed behind married persons who now comprised 50.79 percent. Slight increases were noted in the widowed (0.14 percentage point), the divorced or separated (0.19 percentage point), and not stated (0.01 percentage point) categories.

More than half of the rural populace were married (52.16%), compared to 49.16 percent of the urban dwellers. Consequently, never married persons constituted 43.94 percent of the rural population while their urban counterparts made up 46.57 percent.

Approximately 46.85 percent of the male population 10 years old and over were single, 5.02 percentage points lower than the 1975 proportion. In contrast the proportion of married males went up from 46.05 percent to 51.13 percent. The proportion of widowed males, however, slightly decreased by 0.19 percentage point while the divorced or separated reportedly gained 0.10 percentage point. Among the females 43.47 percent were never married, following a 3.07 percentage-point decrease. Married females, on the other hand, rose from 48.07 percent to 50.45 percent. Similarly, the widowed and divorced or separated, respectively, increased by 0.38 and 0.27 percentage point (Table 4).

A BRIEF ANALYSIS

TABLE C – POPULATION 10 YEARS OLD AND OVER BY SEX AND MARITAL STATUS, BATAAN: 1970, 1975 AND 1980

Sex and	19	980	1975		1970	
Marital Status	Number	Percent	Number	Percent	Number	Percent
Both Sexes	229,285	100,00	183,799	100,00	146,922	100.00
Never married	103,506	45.14	90,517	49.25	72,407	49.28
Married	116,446	50.79	86,468	47.04	67,894	46.21
Widowed	7,842	3.42	6,023	3,28	5,748	3.91

Never married	50,369	43.47	42,055	46.54	34,335	46.61
Married	58,453	50.45	43,441	48.07	34,528	46.88
Widowed	6,064	5.23	4,380	4.85	4,212	5.72
Divorced/separated	914	0.79	470	0.52	498	0.68
Not stated	70	0.06	21	0.02	83	0.11

HIGHEST GRADE COMPLETED

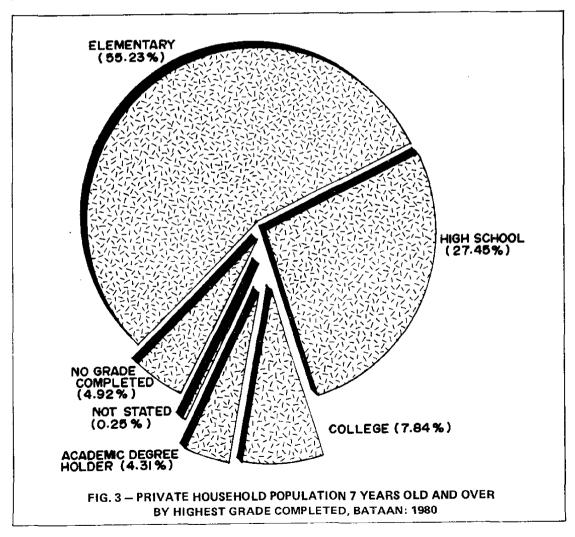

Persons with an elementary education maintained a marked preponderance over those in the other categories, but dropped considerably from 61.74 percent in 1975 to 55.23 percent of the private household population 7 years old and over. On the other hand, those who reached the secondary and college levels increased respectively, by 5.99 and 2.64 percentage points. Academic degree holders likewise rose by 1.31 percentage points, accounting for 4.31 percent. It is interesting to note that the proportion of persons who had no formal schooling went down from 6.47 percent in 1975 to 4.92 in 1980.

Of those who had elementary training, only 36.08 percent graduated from the sixth or seventh grade. Nearly one-third (32.30%) did not go beyond the first to third grade; 18.07 percent attained the fourth grade and 13.55 percent, the fifth grade. Among those with secondary education 50.42 percent reached anywhere from the first to third year while 49.58 percent graduated from fourth year. Majority of the college undergraduates (85.00%) finished the lower collegiate years (1st-3rd year) and only 15.00 percent completed the fourth or higher year (Table 5).

A BRIEF ANALYSIS

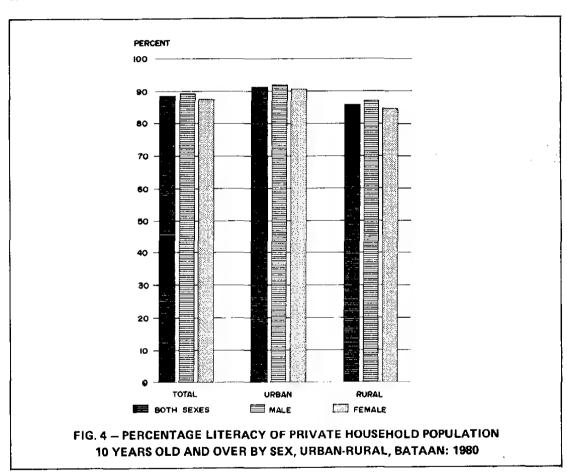

TABLE D - PRIVATE HOUSEHOLD POPULATION 7 YEARS OLD AND OVER
BY HIGHEST GRADE COMPLETED, BATAAN: 1975 AND 1980

Highest Grade Completed	198	30	1975		
	Number	Percent	Number	Percent	
Total	251,838	100.00	206,334	100.00	
No grade completed	12,397	4.92	13,345	6.47	
Elementary	139,098	55,23	127,394	61.74	
High school	69,122	27,45	44,285	21.46	
College	19,738	7.84	10,725	5.20	
Academic degree holder	10,865	4,31	6,199	3.00	
Not stated	618	0,25	4,386	2.13	

LITERACY

Bataan has a high literacy rate, with 88.46 percent of the private household population aged 10 and over able to read and write. Compared to the report of the past decade, however, the literacy rate was 2.51 percentage points lower, brought about by a negligible increase of 0.19 percentage point in the urban rate and a marked decrease of 4.91 percentage points in the rural rate. The males generally outstripped the females in literacy rate — 89.28 percent against 87.68 percent. In both the urban and rural areas the males also registered higher rates than their female counterparts — 91.90 percent and 87.21 percent for urban and rural males compared to 90.99 percent and 84.73 percent respectively, for the females.

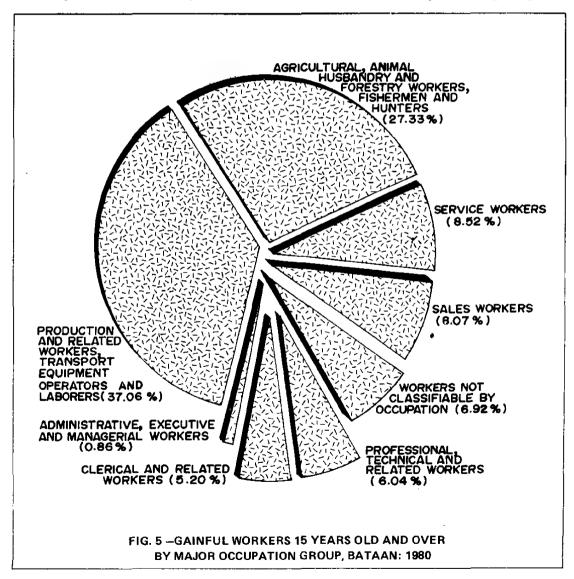

LANGUAGE OR DIALECT

Tagalog is generally spoken in the province. Of the 56,946 private households, 51,031 or 89.61 percent speak the dialect. The urban and rural areas are, likewise, predominated by Tagalog-speaking households, 93.93 percent and 85.91 percent, respectively. Pampango or Kapampangan is spoken by 7.23 percent on account, more or less, of Pampanga's proximity to Bataan. Only 1.20 percent speak Ilocano; 0.66 percent, Pangasinan; 0.64 percent, Lineyte-Samamon (Waray) and the remaining 0.66 percent, one of ten other languages and dialects generally spoken in the province (Table 7).

GAINFUL OCCUPATION

Gainful workers comprise 54.12 percent of the private household population 15 years old and over; the remaining 45.88 percent are in non-gainful activities.

The number of gainful workers has increased to 101,623 from the 1975 report of 73,555 and 62,016 in 1970. A shift from the agricultural to production-oriented occupations is noted in 1980. Agricultural, animal husbandry and forestry workers, fishermen and hunters, with 42.24 percent in 1970 and 38.70 percent in 1975, consistently formed the biggest group of gainful workers in these two censal years. In 1980, however, production and related workers, transport equipment operators and laborers rose by 7.29 percentage points to 37.06 percent, leaving behind the topmost group of the 70's with only 27.33 percent. Service workers, now third in rank, went up by 0.79 percentage point to 8.52 percent, displacing sales workers which substantially declined from 11.45 percent in 1975 to 8.07 percent. Professional, technical and related workers, at 6.04 percent, slightly gained

0.72 percentage point. While clerical workers have likewise grown from 4.19 percent to 5.20 percent, administrative, executive and managerial workers fell from 1.35 percent to 0.86 percent. However, decreases in the proportions of the aforementioned gainful occupations may be attributed to a marked increase in the proportion of workers not classifiable by occupation which suddenly hiked from 1.49 percent to 6.92 percent (Table 8).

The urban areas turned out a higher proportion of gainful workers (57.13%) compared to the rural areas (51.50%) brought about by a higher proportion of housekeepers in the latter than in the former areas. The urban areas also produced more production and related workers while the rural areas, as expected, have more than twice as many agricultural, animal husbandry and forestry workers, fishermen and hunters than the urban areas.

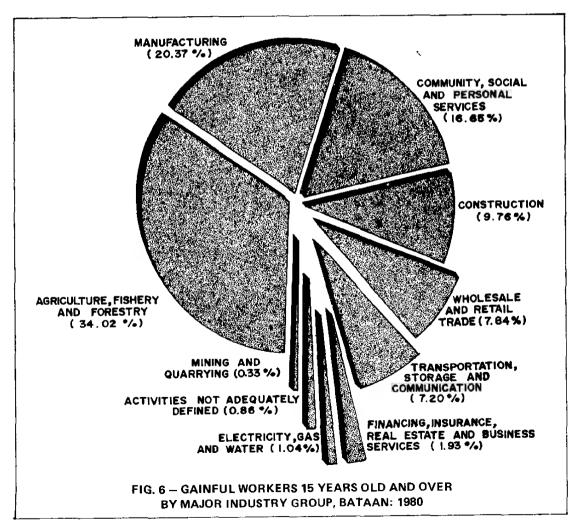

Changes in the proportion of workers engaged in various occupations from 1970 to 1980 are reflected in the following table:

TABLE E -- GAINFUL WORKERS 15 YEARS OLD AND OVER BY MAJOR OCCUPATION GROUP, BATAAN: 1970, 1975 AND 1980

Major	1	980	19	975	1	1970	
Occupation Group	Number	Percent	Number	Percent	Number	Percent	
Total	101,623	100.00	73,555	100.00	<u>62,016</u>	100,00	
Professional, technical and related workers	6,138	6.04	3,916	5.32	4,223	6.81	
Administrative, executive and managerial workers	875	0.86	991	1.35	711	1.15	
Clerical and related workers	5,288	5.20	3,080	4.19	2,196	3.54	
Sales workers	8,196	8.07	8,427	11.45	5,633	9.08	
Service workers	8,661	8.52	5,688	7.73	3,931	6.34	
Agricultural, animal husbandry and forestry workers, fishermen and hunters	27,776	27.33	28,463	38.70	26,197	42.24	
Production and related workers transport equipment operators and laborers	37,657	37.06	21,896	29.77	18,049	29.10	
Workers not classifiable by occupation	7,032	6.92	1,094	1.49	1,076	1.74	

INDUSTRY

Agriculture, fishery and forestry, the dominant industry group in Bataan, provide means of livelihood to 34.02 percent of the total gainful workers 15 years old and over. Majority of the agricultural workers derive their income from agricultural crop production (70.18%) and more than one-fifth, from fishery (24.37%). Manufacturing, the second biggest industry group, employs 20.37 percent of the gainful workers whose principal concentrations are in the manufacture of textile, wearing apparel and leather (50.10%), fabricated metal products, machinery and equipment (17.81%), and chemicals and chemical products, petroleum, coal, rubber and plastic products (11.35%). Community, social and personal services rank third with 16.65 percent. The three leading sources of jobs in this industry group are personal and household services (35.72%), public administration and defense (27.24%), and education services (17.34%). Construction contributes 9.76 percent; wholesale and retail trade, 7.84 percent, transportation, storage and communication, 7.20 percent and financing, insurance, real estate and business services, 1.93 percent. Electricity, gas and water employs over one percent (1.04%); mining and quarrying, only 0.33 percent and activities not adequately defined, 0.86 percent (Table 9).

MIGRATION

Out of the 268,265 private household population 5 years old and over, 88.66 percent are residents of the same municipality where they had lived on May 1, 1975. Of the 30,422 persons or 11.34 percent who then had a different place of residence, 3.59 percent came from another municipality within their home province while 7.58 percent moved across provincial boundaries. Only a small percentage of the population were residing in foreign countries (0.17%). In two migratory movements, there were more females than maleslarger by about 8.60 percentage points in the inter-municipality migration within the province and by 10.38 percentage points among migrants from other provinces. Among former residents of foreign lands, however, the males outnumbered the females by about 8.38 percentage points. It is observed that in these migratory movements, majority migrated to rural areas. Less than half or 42.29 percent of those who came from foreign lands migrated to urban areas (Table 10).

TYPE OF BUILDING

Majority (91.54%) of the 56,946 households of Bataan are occupying single houses. The rest live in duplex (1.30%), apartment/accesoria/condominium/row house (3.41%), improvised structures such as barong-barong (2.28%), commercial/industrial buildings (0.44%), hotel, lodging house, dormitory, etc. (0.87%), other collective living quarters (0.10%), other housing unit (0.03%) and institutional buildings such as hospital, convent, school dormitory, etc. (0.03%). Majority (55.91%) of the households residing in single

houses are in the rural areas while 44.09 percent are in the urban areas. On the other hand, more households in duplex and apartment/accesoria/condominium, etc. are from the urban areas (54.58% for the former and 84.14% for the latter). Approximately 45.42 and 15.86 percent of the households in these respective structures are found in the rural areas (Table 1).

TYPE OF OCCUPANCY

Table 1 also shows that 77.03 percent of the total households are owners of their dwelling units. The rest of the households are either tenants/lessees (13.83%), subtenants/sublessees (0.43%) or rent-free occupants (8.71%).

CONSTRUCTION MATERIALS OF ROOF AND OUTER WALLS

Most of the households (72.61%) in the province are residing in dwelling units constructed with roofs of strong materials such as galvanized iron/aluminum, tile/concrete/brick/stone and asbestos. The remaining 27.39 percent have roofs of light materials such as cogon/nipa, makeshift/salvaged materials, or other materials like anahaw, etc. Households in dwelling units with roof of strong materials are a common sight in both the urban (84.18%) and the rural (62.69%) areas, while those with roof of light materials make up 15.82 percent and 37.31 percent, respectively.

By type of construction materials of outer walls, 73.73 percent of the households are in dwelling units built with walls of strong materials and 26.27 percent of light materials. Most of the households in both the urban (84.46%) and the rural (64.53%) areas are occupying dwelling units built with walls of strong materials. Households in dwelling units built with walls of light materials comprise 15.54 percent in the urban areas and 35.47 percent in the rural areas (Table 2).

YEAR BUILT

More than one-third or 37.00 percent of the total households are occupants of structures built in 1976-1980; 23.76 percent, during 1971-1975; 20.71 percent, 1961-1970 and 9.95 percent, 1951-1960. Only 6.98 percent live in buildings built during 1942-1950 and 1.60 percent, before World War II (Table 2).

FLOOR AREA OF DWELLING UNIT

Nearly half of the total households (45.60%) in Bataan occupy dwelling units with floor area of less than 30 square meters. About 26.14 percent live in 30-49 square-meter dwelling units; 10.83 percent dwell in 50-69 square-meter units and 7.53 percent, 70-99 square meters. Only 9.90 percent have spacious dwelling units of 100 square meters and over (Table 3).

TENURE OF OWNER-OCCUPANT WITH RESPECT TO THE LAND

Of the 43,865 households that own their dwelling units, 48.32 percent also own the land where the structures are erected. The rest are distributed as follows: 18.09 percent, lessee or sublessee; 2.51 percent, farm lessee/agricultural tenant of landowner; 5.86 percent, other legal tenure and 25.22 percent, no tenure such as squatters (Table 4).

A BRIEF ANALYSIS

SOURCE AND USE OF WATER SUPPLY

A greater proportion of the total number of households in the province depends largely on the faucet, community water system than on any other source of water supply whether for drinking (51.25%), for kitchen use (50.69%) or for washing clothes (49.27%). Approximately 27.46 percent use water from tubed/piped deep well for drinking; 12.70 percent, tubed/piped shallow well; 2.30 percent, dug well and 5.32 percent, spring. Only 0.97 percent reported lake, river, stream, etc. as their source of drinking water. Nearly the same proportion of households use water from these sources for kitchen use: 27.21 percent, tubed/piped deep well; 12.81 percent, tubed/piped shallow well; 2.78 percent, dug well; 5.17 percent, spring and 1.34 percent, lake, river, stream, etc. For washing clothes, about 26.86 percent use water from tubed/piped deep well and 12.37 percent, tubed/piped shallow well. A few households use water from dug well (2.87%), spring (4.01%) and lake, river, stream, etc. (4.62%).

KIND OF LIGHTING FACILITIES

Effects of the government's massive electrification program are widely felt throughout the province. Electricity has replaced kerosene as the most common type of lighting used, with 72.51 percent of the total number of households now using it, compared to 42.94 percent in 1970. Kerosene, used by 56.83 percent in 1970, is now used by only 25.86 percent and liquefied petroleum gas, by 1.29 percent. A small proportion still use oil and other kinds (0.34%). Most urban dwellers (82.37%) use electricity for lighting, an increase of 24.98 percentage points over the previous figure. Consequently, users of kerosene (16.48%) dropped sharply by 25.92 percentage points. A higher proportion of the rural households (64.05%) also use electricity, an increment likewise, of 25.05 percentage points and a corresponding decrease of 26.88 percentage points for users of kerosene (33.91%). Liquefied petroleum gas, not used in 1970, is now used in the urban as well as in the rural areas, although more households use liquefied petroleum gas in the latter (1.81%) than in the former areas (0.69%). Very few households use oil and other types — 0.46 percent in the urban and 0.23 percent in the rural areas (Table 5).

COOKING FUEL

Wood or charcoal is widely used for cooking by Bataan residents. Despite a decrease of 2.82 percentage points, almost one-half (49.21%) of the total households use wood or charcoal (Table 8). While the proportion of households using kerosene (24.41%) decelerated by 9.25 percentage points, that of households using liquefied petroleum gas (20.62%) gained 9.31 percentage points. The proportion of households using electricity likewise accelerated from 2.38 percent to 4.82 percent, while households using other types of cooking fuel constitute only 0.94 percent. Except for variations in the proportions of urban and rural households using wood, kerosene, and LPG, a similar trend is observed between 1970 and 1980. In both urban and rural areas, the predominant use of wood or charcoal is observed — 34.98 percent of the total urban households and 61.42 percent of the total rural households, compared to 40.54 percent and 55.16 percent, respectively, in 1970. It is also noted that a good number of urban households cook with kerosene (31.10%) and liquefied petroleum gas (25.89%), the same trend recorded in 1970 with 38.35 percent for the former and 18.73 percent for the latter.

A BRIEF ANALYSIS

TOILET FACILITIES

Water-sealed with sewer/septic tank is the most common type of toilet facility in the province with 36.90 percent of the total households using it. Only 9.05 percent use water-sealed other depository; 6.87 percent, closed pit type (antipolo, etc.); 9.89 percent, open pit type and 2.31 percent, other types (pail system, etc.). More than one-third (34.98%) of the total households lack toilet facilities. Urban households have better toilet facilities than their rural counterparts. One-half (50.08%) of the urban households use the water-sealed with sewer/septic tank; 10.77 percent, water-sealed with other depository; 5.55 percent, closed pit; 5.04 percent, open pit and 3.06 percent, other types. Among the rural households 25.59 percent use water-sealed with sewer/septic tank; 7.58 percent, water-sealed other depository; 8.02 percent, closed pit; 14.04 percent, open pit and 1.66 percent, other types. Households without toilet facilities constitute 25.50 percent in the urban areas and 43.11 percent in the rural areas (Table 7).

OWNERSHIP OF RADIO, TELEVISION SET AND REFRIGERATOR/FREEZER

Over two-thirds or 68.55 percent of the households in Bataan have radios; 30.05 percent own television sets and 18.21 percent, refrigerators or freezers. The higher proportions of households owning radios, television sets and refrigerators or freezers (67.30%, 8.23% and 6.09%, respectively in 1970) are attributable to the greater economic opportunities availabe to the residents with the establishment of development projects and multinational corporations in the province. Of the 26,295 urban households, 67.17 percent own radios; 34.19 percent, television sets and 22.13 percent, refrigerators or freezers. Among the rural households, 69.74 percent have radios; 26.50 percent, television sets and 14.84 percent, refrigerators or freezers (Table 9).
